VERSA-LOK MOSAIC GRANDE

RETAINING WALL SYSTEM

VERSA-LOK®
Retaining Wall Systems
Solid Solutions.™

VERSA-LOK UNITS WORK TOGETHER BEAUTIFULLY.

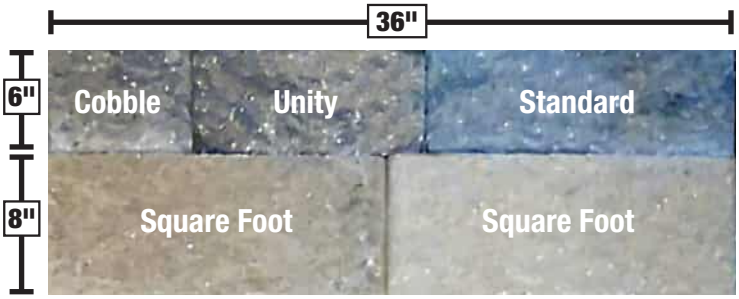

The VERSA-LOK® Mosaic® Grande retaining wall system represents the ultimate combination of aesthetics and performance in segmental retaining walls. The system provides a more cost-effective solution than other random-pattern wall systems. The Mosaic Grande system comprises 5-unit panels that can be configured in various ways to create a random appearance. Each panel consists of two Square Foot wall units, one Standard unit, one Cobble unit, and one Unity wall unit.

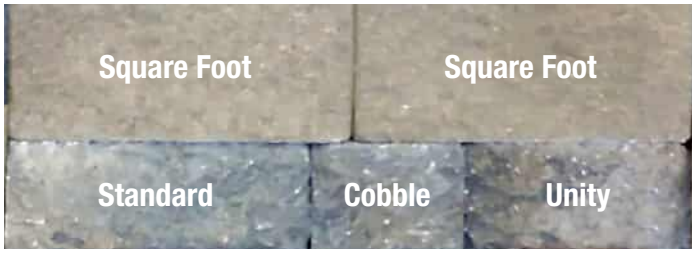

By combining panels in various ways, you can create walls with a random appearance resembling natural stone. One panel (36" w x 14" h) provides 3.5 square feet of face area. The Mosaic Grande wall system is the perfect fit for commercial projects that require mid-size to tall walls. Installation of repeating panels is quick and simple. All units interlock within panels and between panels with our patented hole-to-slot pinning system. The pins are inserted through holes in the upper units and into slots in the units below to create a physical connection between courses. Slots allow variation in the placement of vertical joints, and this variable bond feature contributes to the wall's random appearance. Matching cap units attractively finish VERSA-LOK Mosaic Grande walls.

UNREINFORCED

SOIL-REINFORCED

Please note: The maximum height for an unreinforced Mosaic Grande retaining wall is 3 feet. Taller walls up to 50 feet+ require soil reinforcement and engineering assistance. Individual site, soil and loading conditions (including terraces) may limit unreinforced wall heights to less than 3 feet. Check your local building code requirements. Please contact your supplier or VERSA-LOK representative for assistance.
